

Law Enforcement Survey Protocol

For the law enforcement survey select a minimum of 5 law enforcement authorities in your communities to complete the survey. Your communities have been defined by the memo you received designating your communities and sample size. If you have multiple communities assigned to you, you need to collect a minimum of 5 law enforcement surveys in **each** community.

Law enforcement officers can include any type of law enforcement officer which may include but is not limited to: Sheriffs, Security Guards, Campus Police Officers, School Police Officers, State Patrol Officers, ect. A law enforcement authority for data collection purposes is defined as someone who enforces laws, rules and regulations in the community.

Law enforcement authorities may either complete the surveys themselves or the survey proctor can ask the law enforcement authorities the questions and write their responses on the survey. Before implementing the survey, please use the **Adult Consent Form** and have the enforcement authority agree to take the survey before you collect their information.

Once all of the law enforcement surveys are collected the information needs to be compiled and summarized. Please use the **Law Enforcement Data Summary Template** to summarize your data. The survey information will be used in your Needs Assessment Report, and further instructions will be provided in the Needs Assessment Template to help you include law enforcement survey summaries in your Needs Assessment Report.
